REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

The prior art of record do not teach or suggest, in the claimed combination thereof, a lamination ceramic chip inductor, formed by the process comprising the step of interposing a conductive pattern between a pair of magnetic insulation layers so as to be in contact with the pair of magnetic insulation layers and so that the magnetic insulation layers contact one another in areas not in contact with the conductive pattern, *wherein the conductive pattern is continuous on one surface of at least one of the magnetic insulation layers and the conductive pattern is substantially free of discontinuities*. Continuous, by applicant's definition in the Declaration under 37 CFR 1.132 filed 2/10/2005 of co-pending application 10/355368, as in a continuous conductive pattern, is understood to mean that the lines in the pattern are substantially free of discontinuities. A continuous pattern is distinguished from a discontinuous pattern in which the lines have many discontinuities. As explained in applicant's previous Declaration dated March 7, 2002 of co-pending application 09/525247, a discontinuous pattern is caused by printing a line with a pitch of less than 50 microns through a mesh; mesh fibers correspond to discontinuities.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
